OUR COMPANY

Our company was founded in 2010 and is located in Botou City, Hebei Province.

Our main business focuses on the following areas:

1. Manufacturing and developing 3D welding tables and welding fixtures
2. Manufacturing cast iron T-slot plate

Our company has 3 CNC gantry milling machines, which can process up to 4000x2000mm welding tables.

Monthly production of up to 30-40 pcs welding tables

We Supply The World

1

Up to now, we have agents in many countries, including Russia, South Korea, Israel, Finland, Switzerland, Sweden, Taiwan, and Italy. We are recruiting agents in other

2

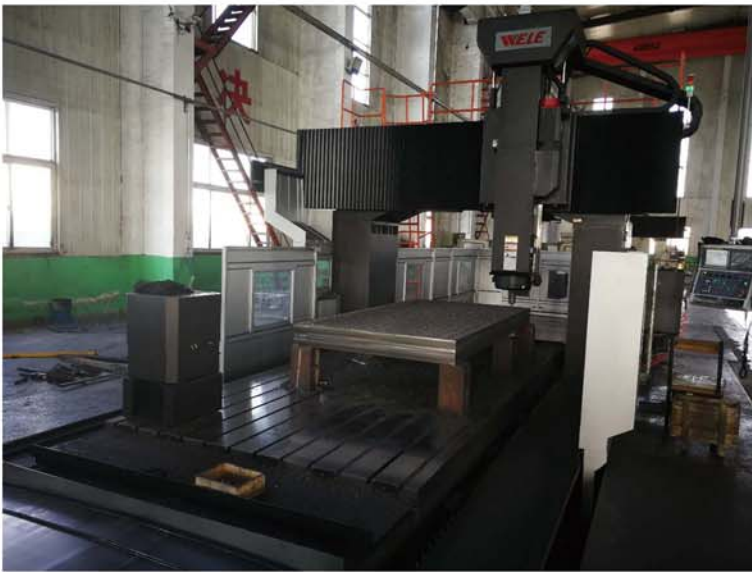

Our company has three CNC milling machines, which can provide customers with products quickly.

3

We are currently developing nitrided welding table and D16 series welding table.

PRODUCTION CAPACITY

Our company has a strong production capacity. We have imported high-end processing equipment from Taiwan. The main equipments include 5000x2000x1050mm, 3000x1500x1200mm, 2000x1050x850mm CNC gantry machining centers, and several high-precision CNC numerical control milling machines. The company has a matching welding plant and foundry to provide integrated services to customers.

Sufficient Inventory

3D/2D welding table

Welding table

There are two types of tables made by different materials, high-quality alloy steel and gray cast iron (HT300) .

They can also be made according to special requirements.

Flatness and parallelism of all basic tables reach $\pm 0.1/1000$, and vertical degree between side face and surface reaches level-7 precision ($\pm 0.1/200$); basic tables have good performances in impact resistance, abrasion resistance, splash proof and creep-deformation resistance.

There are 100 x100mm (D28 series) or 50x50mm grid lines (D16 series) on the surface of basic tables; the tables can be jointed and adjusted freely through modular so as to make a larger fixture

Spacer Block

There are situations where having a bigger table would be nice. We developed the spacer block so the clamping table can grow with your needs. A smart system for extending your table temporarily.

Clamping and locating angle

Work can be so easy! As a stop, table expansion or to secure angled work pieces at 90° kidney shape expands the application possibilities several times over. With the new design, stability was increased by up to 40 % depending on the loading case.

locating angle 300
